

COM/DCOM Blue Book: The Essential Learning Guide for Component-Oriented Application Development for Windows

To demonstrate COMs language independence, the book develops projects in four different development environments from the industrys leading vendor--ATL, MFC, VB, and VJ++. Integrates learning about all four aspects of COM (Component Object Model): COM, Automation, ActiveX, and DCOM. Emphasizes component creation and use techniques independent of any single programming language. Focuses on technologies created atop COM: MTS (Microsoft Transaction Server), ASP (Active Server Pages), and OLE DB. Demonstrates COM techniques most appropriate for real-world development in the corporate world. No ivory tower demos!
