

# The Stuff of Life: A Graphic Guide to Genetics and DNA

Lets face it: From adenines to zygotes, from cytokinesis to parthenogenesis, even the basics of genetics can sound utterly alien. So who better than an alien to explain it all? Enter Bloort 183, a scientist from an asexual alien race threatened by disease, whos been charged with researching the fundamentals of human DNA and evolution and laying it all out in clear, simple language so that even his slow-to-grasp-the-point leader can get it. In the hands of the award-winning writer Mark Schultz, Bloorts predicament becomes the means of giving even the most science-phobic reader a complete introduction to the history and science of genetics thats as easy to understand as it is entertaining to read.
